ABSTRACT: In the evolving world the technology play fundamental role, the person should be specialized and technical powerful for that person should have good education. Education is the basic need of every person, the person with the disability also have the right for good education, for good education there should be prosperous environment and that environment should be accessed to all. The paper deals with the Design components and the elements of the technical education for both able and dis-able person and focusing on the Class room, Toilet, Staircase, Kitchen, Passage, Parking and Hostel room.

KEY WORDS: Disability, Activities, Barrier-free, Design, Educational campus, Government, Dis-able person.

I.INTRODUCTION

A reasonable layout around and inside the campus should be accessible and generous for all users involving disabled persons. The environment should deliver some activity nodes to guarantee that the learning and working on the campus is more comforting. It will share experience on the instruction of inclusive design for learners who will become connoisseurs and reliable in executing the ordinance relating to safety, accessibility and usability of the built educational environment.

A barrier-free education built environment is a space that permits for independent and comfortable motion, function and approach for all, regardless of generation, genders, or disorder. Territories or a set of duties that can be accessed by everybody, without obstructions, with satisfaction and with as much as liberation as feasible. The environment means every things like buildings, freeways, parks, playgrounds and other places, services, modes of transportation, a product of daily use, etc.

Who all face barriers?

It is only individuals with disabilities for whom obstacles become prominent barriers. However, it is critical to realise that every individual, at some phase of life, encounters complications. A small kid, a geriatric or infirm person, a pregnant lady, the temporarily challenged, all are shaky to barriers.

Therefore, to list out people affected by barriers –

- 1. leprosy cured person
- 2. cerebral palsy
- 3. dwarfism
- 4. muscular dystrophy
- 5. acid attack victims
- 6. blindness
- 7. low-vision
- 8. deaf
- 9. hard of hearing
- 10. speech and language disability
- 11. specific learning disabilities
- 12. autism spectrum disorder
- 13. mental illness
- 14. chronic neurological conditions

- 15. Blood disorder
- 16. haemophilia
- 17. thalassemia
- 18. sickle cell disease
- 19. Multiple Disabilities (more than one of the above specified disabilities)

Scope of work (Barrier-free design) -

After review of the Government odinances-2016 for person with dis-ability, existing literature on barrier-free design and barrier-free into education then identified the gaps-

- 1. Earlier there was 7 dis-ability but now there are 21 dis-ability (by the Ministry of Law and Justice by the Parliament of India in 2016).
- 2. The integrated approach of technology in barrier-free design (Nomes are independent of technology).
- 3. The accessibility need for children or student with a disability in education at one place.

II. METHODOLOGY

APPROACH OF RESEARCH-

- Step -1- The government ordinances 2016 for the disabled person by (Government of INDIA).
- **Step -2 -** The existing literature on the barrier-free design.
- Step -3 Identification of the gaps based on the existing literature review-
- 1. Earlier in barrier-free there was 7 disability but now there is 21 disability (by the Ministry of Law and Justice by the Parliament of India in 2016).
- 2. The integrated approach of technology in barrier-free design (Norms are independent of technology).
- 3. The accessibility need for children or student with a disability in education at one place.

Step -4 - Identification of the department in research (barrier-free into education campus)

In the education system, there are 4 steps

- 1. Primary Education
- 2. Secondary Education
- 3. University Education
- 4. Technical Education

(Focus on the technical education portion after existing literature review.)

- **Step -5 -** The existing norms and guidelines provided by the administration in the education sector for dis-able persons.(referred to the government act for disability.)
- **Step -6 -** Gone through all the 21 disability (as by the government of India -2016 Act.)

{For more details, meet with the different doctors and also the government doctor (who give the certificate for person with disability.) for more information on disability.}

Step -7 - Literature study of technical campus

First step in it was, done an exercise that was, when doing the bachelor degree so what area have been visited in the college and university note that.

(This exercise help in funding the design components of a technical university and what are the activities are been performed by any able and dis-able person in those areas.)

International Journal of Advanced Research in Science, Engineering and Technology

Vol. 8, Issue 3, March 2021

Second step was, then look 3 technical campus

- 1- IIT-ROORKEE 356 acr.
- 2- ShriVaishnavVidyapeethVishwavidyalaya (svvv), indore 51 acr.
- 3- Ansal technical campus, lucknow- 14 acr.

(And compared them, it gives the areas of the technical university or campus and what activities are been performed there by both able and dis-able persons.)

Step -8 - ANALYSIS OF THE ACTIVITIES PERFORMED BY THE ABLE PERSON AND DISABLE A PERSON.

It gives - what are the challenges are been faced by disable person in performing the different activities.

The problems which will be helping in barrier-free design for technical education campus.

Step -9 - The approach of design research is barrier-free (problem-based approach after analysis of it) 3 main steps are-

- 1. Built Environmental.
- 2. Administrative aspects (Policy, economy)
- 3. Technology aspect.

Step -10 - Conclusions and Inferences

The appropriate government and the local authorities shall take measures to <u>promote</u>, <u>protect and ensureparticipation of persons with disabilities</u> in adult education and continuing education programmes equally with others.

FREE EDUCATION FOR CHILDREN WITH BENCHMARK DISABILITIES.—

International Journal of Advanced Research in Science, Engineering and Technology

Vol. 8, Issue 3, March 2021

- Rights of children to free and compulsory education act, 2009 (35 of 2009), every child with benchmark disability between the age of six to eighteen years shall have the right to free education in a neighbourhood school, or in a special school, of his choice
- The appropriate Government and local authorities shall ensure that every child with benchmark disability has access to free education in an appropriate environment till he attains the age of eighteen years

RESERVATION IN HIGHER EDUCATIONAL INSTITUTIONS-

- All Government institutions of higher education and other higher education institutions receiving aid from the <u>Government shall reserve not less than five per cent</u>. seats for persons with benchmark disabilities.

IV. DIFFERENT KINDS OF DISABILITYS (As pre government of India act -2016 by Law and Justice)

1. Physical disability.—

- A. Locomotor disability (a person's inability to execute distinctive activities associated with movement of self and objects resulting from affliction of musculoskeletal or nervous system or both), including—
- (a) "leprosy cured person". means a person who has been cured of leprosy but is suffering from—
- (i) loss of sensation in hands or feet as well as loss of sensation and paresis in the eye and eye-lid but with no manifest deformity;
- (ii) manifest deformity and paresis but having sufficient mobility in their hands and feet to enable them to engage in normal economic activity;
- (iii) extreme physical deformity as well as advanced age which prevents him/her from undertaking any gainful occupation, and the expression "leprosy cured" shall construed accordingly;
- (b) "cerebral palsy" means a Group of non-progressive neurological condition affecting body movements and muscle coordination, caused by damage to one or more specific areas of the brain, usually occurring before, during or shortly after birth;
- (c) "dwarfism" means a medical or genetic condition resulting in an adult height of 4 feet 10 inches (147 centimeters) or less;
- (d) "muscular dystrophy" means a group of hereditary genetic muscle disease that weakens the muscles that move the human body and persons with multiple dystrophy have incorrect and missing information in their genes, which prevents them from making the proteins they need for healthy muscles. It is characterised by progressive skeletal muscle weakness, defects in muscle proteins, and the death of muscle cells and tissue;

VI. CONCLUSION AND FUTURE WORK

While planning the technical educational campus for disable person first we should note the design components then those components further divided into area of activities and those area of activities should be access by both able and dis-able person. To make the design activities access we should make the design elements access as we succeed in making the elements access we accomplish Barrier- Free Design. In this I have examine 21 design components area, more than 100 area of activities and 1000 of elements but I have given the design solution of 7 – class room, toilet, staircase, kitchen, passage, parking and hostel room after discussion with the dis-able person and more to continue.
